

ISONIAZID

eye-so-nye-ah-zid

What does it do?

Isoniazid is used to treat or prevent tuberculosis.

Before you start

- Tell your doctor if you have liver or kidney problems, or if you have ever had a seizure.
- Tell your doctor if you are pregnant, planning to become pregnant, or breastfeeding.

How should you take it?

Take *isoniazid* regularly as directed with a glass of water.

Take each dose on an empty stomach - one hour before or two hours after food.

Keep taking *isoniazid* until the course is finished, even if you start to feel better.

What if you forget a dose?

Take the missed dose as soon as possible. If it is close to the time for your next dose, skip the missed dose and carry on as normal. Do not take two doses at the same time. If you often forget to take *isoniazid*, your tuberculosis may not be fully treated.

Can you take other medicines?

Some medicines available without a prescription may react with *isoniazid* including:

- antacids (e.g. Mylanta®) - do not take these within two hours of taking *isoniazid*.

Tell your pharmacist or doctor about all medicines or treatments that you may be taking, including vitamins, herbal products or recreational drugs.

What side effects might you notice?

Side Effects	Recommended action
Symptoms of liver problems including: yellow skin or eyes, itching, dark urine, pale bowel motions, abdominal pain Numbness or tingling of the fingers or toes Dizziness, slurred speech, unsteadiness	Tell your doctor immediately
Nausea, stomach upset	Tell your doctor if troublesome

If you notice any other effects, discuss them with your doctor or pharmacist.

Other information:

- Limit alcohol intake while taking *isoniazid*. Alcohol may increase the risk of liver problems.
- Your doctor may prescribe pyridoxine (vitamin B6) to prevent tingling of the fingers or toes, which can sometimes be a side effect of *isoniazid*.
- Do not stop taking *isoniazid* without talking to your doctor first.
